

Final-13682 · convergence to the same target

13,682 cameras · 4.46M points · 28.99M observations · 3 fresh runs per configuration

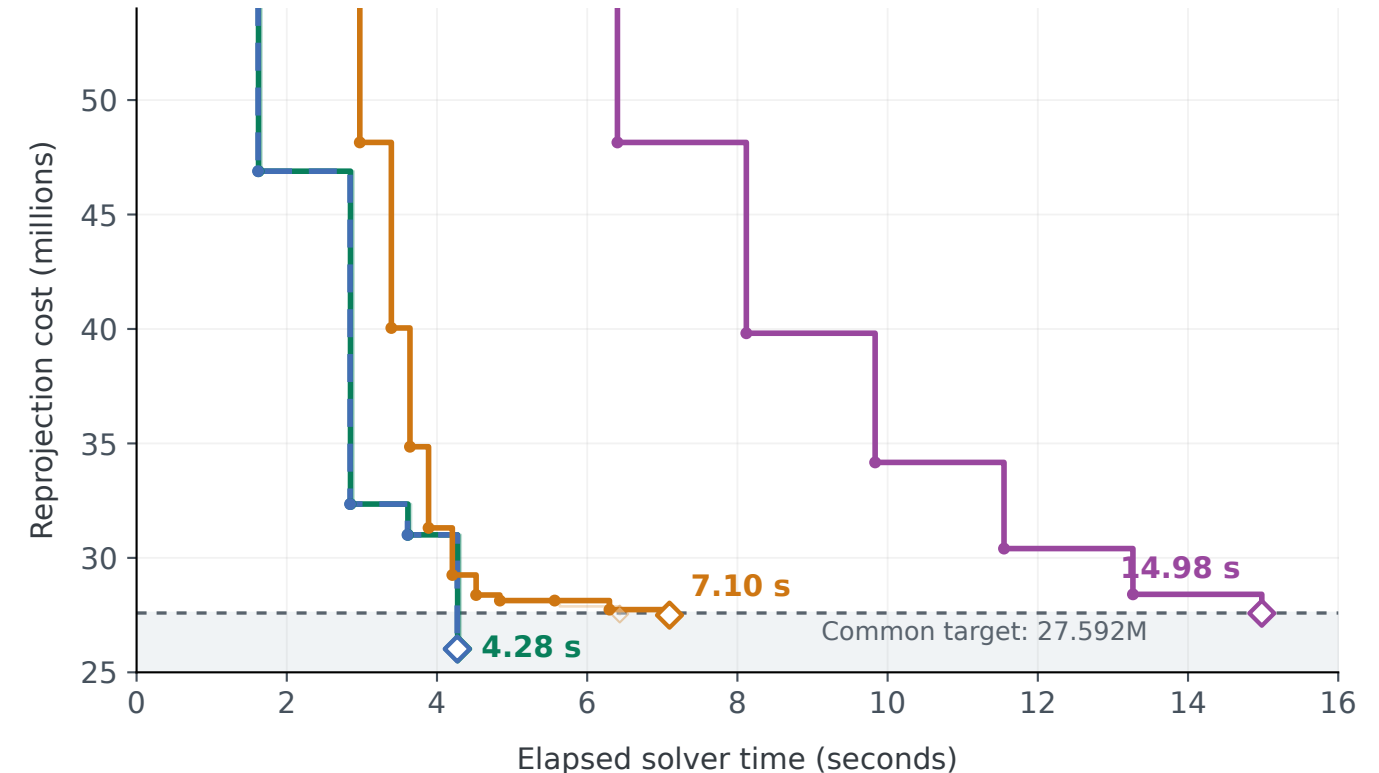

Prism · current guard Prism · guard off Caspar FP32 Caspar FP64

Full decrease · logarithmic cost scale

Prism median: 4.28 s | **1.66× faster than Caspar FP32** | **3.50× faster than Caspar FP64**

Near the fixed target · linear cost scale

Bold = run with median target time; faint = other repeats. Diamonds = independently audited endpoints. Curves stop at the target.

Native cost traces; FP32 endpoint rescored in FP64. Native solver clocks: Caspar graph setup excluded; Prism solver-local setup included.

Prism CSV timing is aligned to its final target event. Guard on/off overlap: the numerical guard never activates on this scene.
