

Ladybug-1469 · Caspar FP32 terminates far above the target

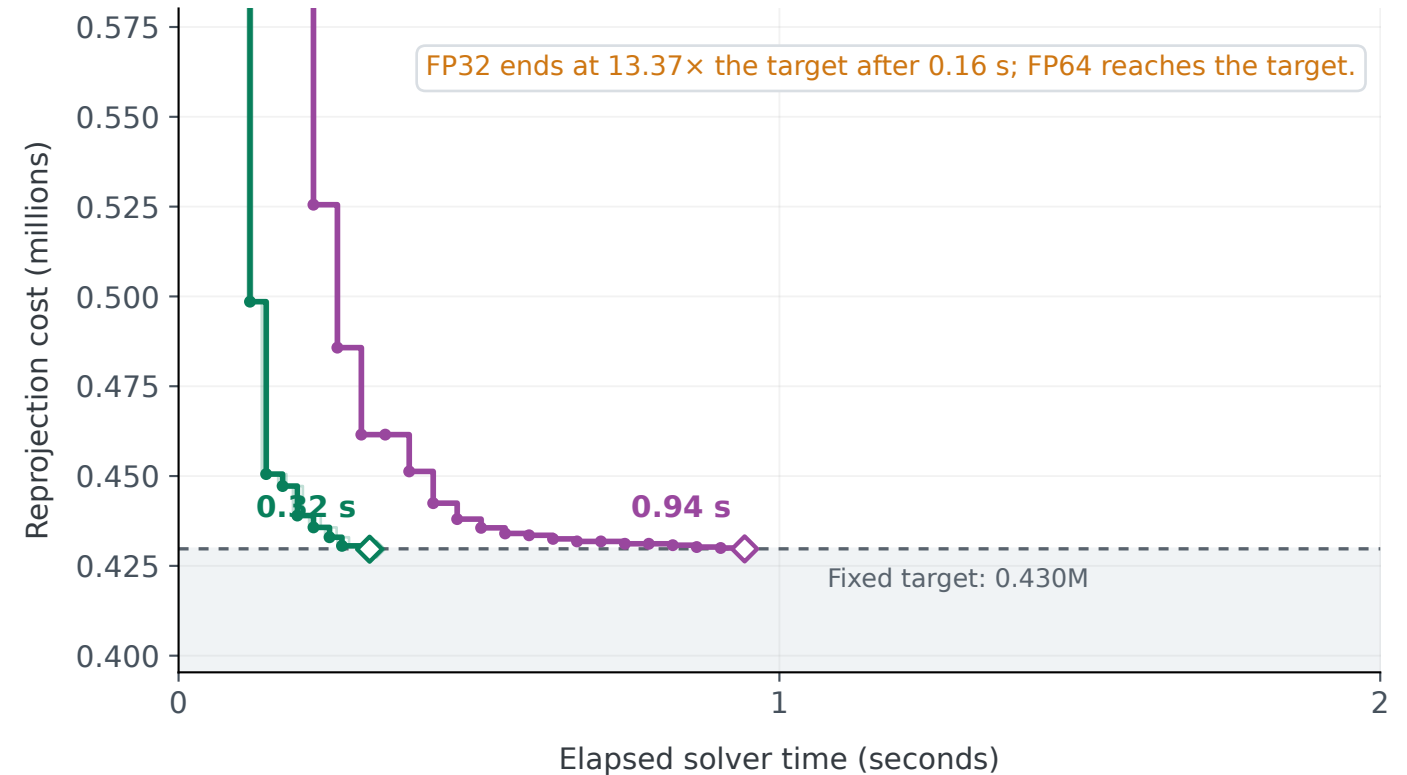

1,469 cameras · 145k points · 642k observations · 3 fresh runs per configuration

Prism · current guard Caspar FP32 Caspar FP64

Full decrease · logarithmic cost scale

Target region · linear cost scale

Prism: 3/3 target hits, median 0.318 s | **Caspar FP32: 0/3; median endpoint 13.37× target** | **Caspar FP64: 3/3, 0.942 s**

Bold = complete run with median endpoint time; faint = other repeats. Diamonds = independently audited endpoints.

Prism stops at the fixed target; Caspar curves end at their target or the native cap/iteration limit. No continuation is inferred.

Native cost traces; FP32 endpoints independently rescored in FP64. Caspar graph setup excluded; Prism solver-local setup included.
